

Meal Tracker® Communication Manager

Allows district-level users control, without the hassle!

Eliminates school visits, allowing you to be more productive!

- Task Scheduler allows you to schedule backups and other unattended system functions.
- Bi-directional communication/data transfer between central office and schools.
- Distribute software updates to each school from the

district office. This keeps school site users on a common software version, and eliminates the need for district users to visit the schools.

- Password protection and user profiles.
- District-wide polling of all schools.
- Polling diagnostics indicate whether polling was unsuccessful.
- Transfers data from one module to another electronically.
- System setup options can be determined in one place, by one user.
- Provides backup tasks for all data system-wide.
- Emergency data restore puts schools back in business quickly.
- Remote diagnostics allow you to take control of a school computer . . . this is very useful to fix printer problems and other common interruptions.
- Sends updated eligibility information to school POS computers.
- Ability to re-index all data files system-wide.
- Data can be transferred by WAN, modem, or diskette.
- Supports many popular data transfer protocols.
- Can be used on most popular network types.
- Windows 95, 98, NT, 2000, ME, XP.
